

# The Universal Short Graph Language

## Introducing the $\sqcup$ language

Laurent Fournier\*

August 3, 2012

The  $\sqcup$  language is a **Universal Graph Language**;

- Symbol:  $\sqcup$ .
- Name: "square cup".
- Universality (close to "u").
- Unicode character  $\sqcup$ : (U+2294).
- License: GPL v3.

...as *Extended Literate Programming*

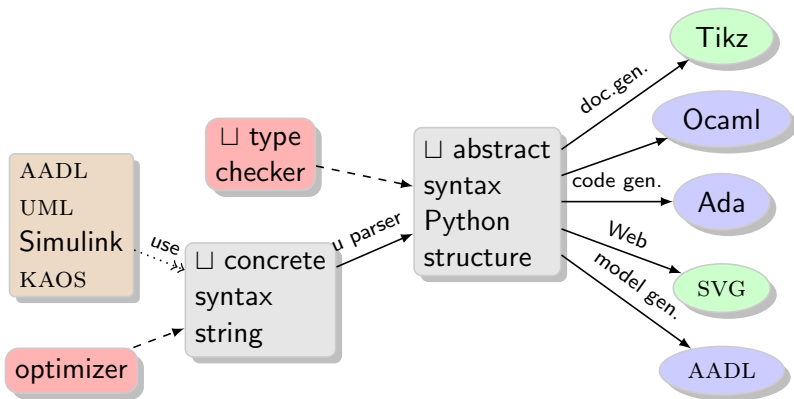

$\sqcup$  is a sparse graph language

In  $\sqcup$ , "A→B" string is simply rendered as:  
(TikZ output)

- **T**-yped.
- **H**-ierarchical.
- **O**-nline.
- **N**-eutral.
- **U**-nicode.
- **S**-hort.

...inspired from the Dot (Graphviz) and yUML language to fix some XML pitfalls

- Model concept: model (AST), diagram, string.
- Object concept: object, node, token.
- Relation concept: relation, arc, link.
- Port concept: model port, port, dot port.
- Attribute concept: property, content, label.
- Type concept: type, category, class.

N-ary relation, composition, Concept of *role* defined by the couple:  
(*port type*, *node type*)
